

Taking a Snapshot

1. Click on Start to run the VM
2. Create a Folder with some files in it.
3. Go to Machine> Take Snapshot
4. Enter Snapshot Name and click on Ok.
5. Create another folder with some files in it.
6. Again Go to Machine> Take Snapshot
7. Enter Snapshot Name and click on Ok.
8. Create another state. Create a new folder indicating the new state.
9. Shut down the VM.

Restoring Snapshot.

1. Select the VM from VM list on the left.
2. Snapshots taken will be visible on the right
3. Click on the Snapshot 1 and click on Restore.
4. There will be a prompt to create snapshot of the current VM. Check it and click on Restore
5. Enter the snapshot name of the current VM and click on Ok.
6. Click Current State and Start
7. This will start the machine with state as defined in Snapshot 1.
8. Shut down the machine.
9. Choose the Snapshot 2 and click on Restore.
NOTE TO UNCHECK THE CHECKBOX TO CREATE A SNAPSHOT OF CURRENT MACHINE STATE.
10. Again click Current State and choose Start.
11. State 2 will now be visible.
12. Again shut down and choose, restore snapshot for current state.
NOTE TO UNCHECK THE CHECKBOX TO CREATE A SNAPSHOT OF CURRENT MACHINE STATE.
13. Click on Current State and Start
Current machine state will be restored.
